

In-vehicle Hands-free-9505A RST978

The RST978 In-vehicle kit provides full hands free operation for the Iridium Handheld 9505A Satellite Telephone.

The In-vehicle hands-free enables the user to have a professional in-vehicle installation for the Iridium telephone with the added benefits of having away from vehicle communications.

Market Applications

The In vehicle kit can be deployed into various markets and applications. The complete kit is easily installed into most types of vehicles

Installation

Selecting an appropriate antenna and antenna cable for the installation is very important for optimum performance. The speaker, microphone and cable assemblies are all supplied with the kit, however you must choose an optional mounting cradle for the handset, antenna and antenna cable suitable for the applications.

Full In-vehicle Integration

The Beam In vehicle kit allows for a quality semi-permanent installation to the vehicle. The antenna, microphone and speaker are simply installed in a convenient location within the vehicle and then handset is installed in the cradle once required for use.

Alert / Tracking Interface

The In vehicle Hands-free is capable of being used in conjunction with one of the Beam TrackALERT interface units and the data connector for a 9505A handset. This will support deployment for tracking, monitoring and emergency alert installations whilst providing the convenience of full hands free operation.

In-Vehicle Communications

Convenient Communications

Simple Installation

Remote Communications

Key Features

- Convenient Hands-free Operation
- Supports Intelligent Handset
- Comm. / Data Port
- Handset Charging
- Horn Alert Integration
- 11-32V DC Input
- Supports Voice & Data Services
- Full Duplex Hands-free Operation
- Echo Cancellation
- Stereo Integration Possible
- Supports DC Power Input
- Convenient Installation

Intelligent Handset Interface

The In-vehicle kit supports the optional Beam Intelligent Handset, RST970. The handset supports voice calls as well as utilizing the Iridium SMS service. The handset is compact and includes an inbuilt ring alert. The handset also enables a private in vehicle conversation.

9505A Functionality

The 9505A will support all the standard functionality whilst being used with the Beam In-vehicle kit. The in-vehicle installation will also work in conjunction with the 9505A data connector if required.

The major advantage of an in-vehicle kit is the hands-free use along with the permanently installed antenna for increased call quality and signal penetration.

Handset Charging

When the 9505 is connected to the in vehicle cable assembly / hands free the 9505 battery is charged whilst the vehicles ignition is on.

Warning

It is recommended to have the RST978 installed by a qualified Auto Electrician. The handheld handset should not be used whilst operating a vehicle.
